

# Why KAMLOK is safe

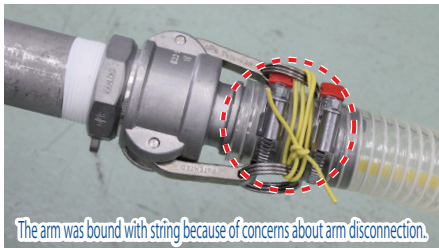

## Point

### 1 Significant improvement of safety

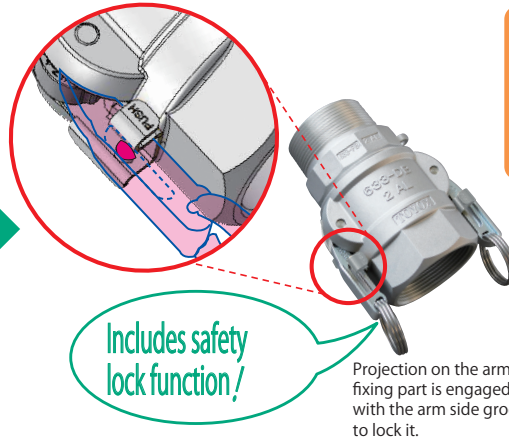

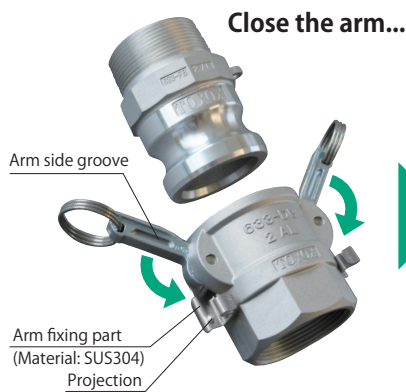

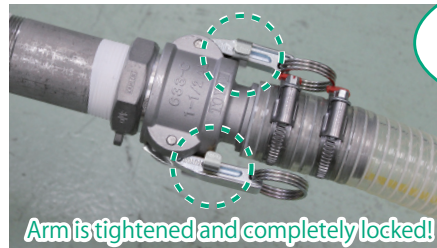

- The arm can be locked without effort and unintentional arm looseness and disconnection are prevented for safety and security.
- Lock completion is noticeable with the "click" feeling. So you can check safety easily.
- Thanks to the disconnection prevention, there is no need for binding the arm with wire or rope. This is an improvement in workability.

#### General Items

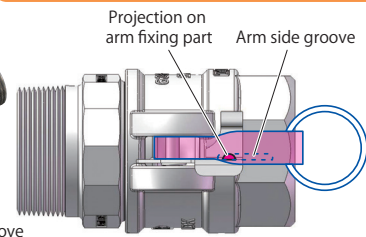

#### TWINLOK

"Vibration resistance comparison TWINLOK VS Our general product"

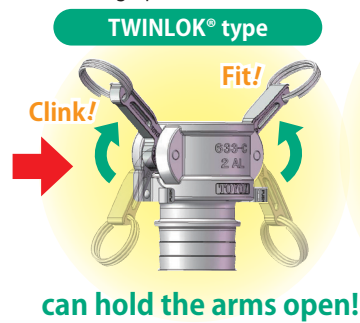

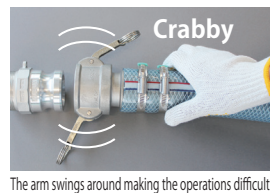

Video distributed on our website <http://english.toyox-hose.com/>

### 2 Workability improved

The arm can be temporarily fastened being opened, so connection work may be smoother.

#### General Items

#### Disconnection is also easy!

Press and hold the "PUSH" mark on the arm fixing part and open the arm.
